THE CLUSTER CONSORTIUM

Our Mission

To improve health outcomes in JIA by advancing the care of patients with arthritis and uveitis through understanding of disease mechanisms and outcomes.

Our Vision

Develop new understanding and classification of disease, by development of tools that help to predict disease course and likely response to medicines, ultimately leading to development of new and personalised therapies for JIA (arthritis and uveitis).

This will be achieved by multidisciplinary working with experts, applying the best methods for research, such as artificial intelligence, to make the most of the biomedical data revolution. This will all be done with patients at the heart of research, ensuring that our research is open and explainable to all.

We Do This By

- Working with exceptional researchers and clinicians
- Being collaborative and multidisciplinary
- Making data findable, accessible, interoperable and reusable to speed up and maximise research impact globally
- Developing careers
- Working as a community of;-
  Patients, Carers, Industry, Charities, NHS and Academia
